TO BUILD POWER PLANT.

At a meeting of the board of trustees of the Allentown Hospital last evening it was decided to erect a power building and laundry plant for the institution. The power plant is to be placed on the grounds on the Gordon street front. A high-pressure steam boiler will be installed for heating the building, furnishing power and operating the sterilizing plant. The laundry building will adjoin it and both will be one story in height. The laundry and power plant are now in the basement of the hospital where they have become objectionable and take up needed room. It is for these reasons that the change has been decided upon.
