Surgical Treatment of Multiple Vein Graft Aneurysms in 72 Year Old Man

Heather Geist, Raymond Singer MD, James Wu MD
Department of Surgery, Division of Cardiothoracic Surgery, Lehigh Valley Health Network, Allentown, Pennsylvania

Introduction

Saphenous vein graft (SVG) aneurysms following coronary artery bypass graft (CABG) surgery are rare but fatal complications that frequently require surgical repair.1 This study addresses a rare surgical case involving two SVG aneurysms with thrombus in an 72 year old man, requiring a third sternotomy 22 years following CABG.

Methods

All information was gathered retrospectively using the LVHN medical records and database. Patient data was analyzed primarily from 2007 to the present. Surgical dictations, CT scans, and chest x-rays were all reviewed.

Results

<table>
<thead>
<tr>
<th>Year</th>
<th>Preliminary Cause for Surgery</th>
<th>Surgical Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>1991</td>
<td>Emergent, unstable angina</td>
<td>CABG x3, SVGs to LAD, second marginal and RCA</td>
</tr>
<tr>
<td>2007</td>
<td>Significant dyspnea, substernal chest pressure, catheterization showed LAD with stenosis, RCA graft occluded and aneurysmal, second marginal occluded</td>
<td>Redo sternotomy, CABG x2, LIMA to LAD and a SVG to second marginal</td>
</tr>
<tr>
<td>2013</td>
<td>Following syncope episode, growth of RCA graft aneurysm from 4 cm to 8 cm</td>
<td>Redo sternotomy, resection of giant RCA vein graft aneurysm, CABG x1 with CryoVein to distal posterior descending artery</td>
</tr>
</tbody>
</table>

Table 1. Significant cardiothoracic surgical procedures and timeline of occurrence with description

Conclusion

True or pseudoaneurysms can arise following CABG surgery. It was determined that this patient presented with two true aneurysms, which are frequently late complications after surgery.2 Our patient presented with common symptoms accompanying aneurysms, including a syncope episode,3 history of hyperlipidemia, and a history of myocardial infarction.4

A previous study using a small cohort had found that SVG aneurysms to the RCA and circumflex were two of the three most frequent aneurysm grafts.4 Complications experienced by this patient as a result of the aneurysm lead to necessary surgical intervention.
