Standardization of Fall Interventions in the Emergency Department

Shena Alvarado BSN,RN; Andrew Chinofsky BSN,RN; Nicole Lucchese BSN,RN; Christopher Painter BSN,RN; Nicholas Tucciarone BSN,RN

Lehigh Valley Health Network, Allentown, Pennsylvania

BACKGROUND / INTRODUCTION

Cedar Crest Emergency Department has noticed a significant statistical increase in patient falls between the 2015 and 2016 fiscal years.

- CPM fall risk assessment tool scores do not correlate to appropriate fall interventions.
- Many practitioners need assistance with appropriate bed-check set up.
- Cost: Bed-check device \$22/each vs. increased length of stay/ avoidable hospitalization

Purpose: To standardize implementation of fall risk interventions based on patient's assessed fall risk and impulsivity factors.

PICO QUESTION

For patients identified as a fall risk in the adult ED, does standardization of fall risk interventions lead to increased use of appropriate interventions?

- P Adult patients in the Emergency Department.
- I Standardization of fall risk interventions based positive fall risk screening and impulsivity factors.
- C Pre-standardization versus standardization of interventions.
- O Increased use of appropriate interventions.

METHODS / IMPLEMENTATION

- Pre-standardization fall intervention chart audit.
 - Review of previous fall charts.
 - Audit of fall scores, history, chief complaint/ medications given.
- Education / Observation

- Verbal promotion and education.
- Spot checks during evaluation period.
- Post-standardization of fall interventions audit.
 - Interventions and fall score correlations were audited and spot checked.
 - 50 pre-education/ 50 post-education audits and spot checks.
 Falls by Month

BARRIERS

- Inconsistent education of staff regarding the use of bed-check devices.
- Loss of bed-check transmitters during patient transport to assigned unit.
- Staff noncompliance/misunderstanding of purpose of fall interventions.
- Inconvenient location of fall risk assessment in the electronic medical record (ASAP in Epic).

CONCLUSION

- Standardized Fall Prevention education is necessary for all members of ED.
- Increased patient and family education to engage in fall prevention strategies.
- Project results showed increased use of bed-check devices and appropriate allotment of one-to-one personnel.
- An increase in appropriate fall scoring and re-evaluation of fall risk was achieved after educating staff.
- Reevaluation of fall risk post-administration of medications that increase fall risk continues to be a challenge.
- New room/hallway/bathroom signage and efforts to prominently feature fall score evaluation in the electronic medical record promote the topic.

A PASSION FOR BETTER MEDICINE.
